Sep 2025

Frontend Developer

INNORIX VIETNAM COMPANY LIMITED

Hardware-based File Transfer

- Participated in a ReactJS project about file transfer with a team in Korea.
- Optimized rendering architecture for large datasets (1m+ transfers), boosting performance by 40% while ensuring smooth user experience.
- Proposed and built a Component Documentation System to speed up component search and onboarding, improving new developer efficiency.
- Integrated socket for real-time notifications, enabling live monitoring of file transfers and a system settings configuration for users.
- Refactored project layout and routing architecture for better scalability, performance, and maintainability.

Admin System

- Migrated a huge legacy admin system from SailJS to ReactJS, improving performance and speed by 50%.
- Set up project and route/layout architecture.
- Developed a PDF invoicing and quotation system, allowing various departments to generate and send invoices directly to customers.
- Built a monitoring system for the marketing and business development teams to manage contacts, partners, and company users effectively.
- Created a content management system (CMS) for managing news articles and inquiries which are displayed on the company's homepage.

Personal Project

Audio Steganography

Jul 2024 - Oct 2024

Github : github.com/tranlequochong313/CipherNestFE

Team size: 1

Demo : cipher-nest-fe.vercel.app

- Conducted research on data hiding algorithms to evaluate and identify effective techniques for embedding and extracting information.
- Implemented data embedding and extraction algorithms using Python, Django, ReactJS, and TypeScript, incorporating encryption and compression to maintain data integrity and minimize audio quality loss.
- Enhanced overall data security by applying AES encryption prior to embedding.

E-Learning Platform

Jan 2022 - Apr 2022

Github : github.com/tranlequochong313/f8CloneFE

Team size: 1

Demo : f8clone-fe.vercel.app

- Designed and implemented systems for courses, chapters, and lessons with real-time comments using ReactJS, ExpressJS, enabling seamless student-instructor discussions.
- Developed a forum to support interactive discussions and built a search system covering courses, articles, and users for improved accessibility.
- Integrated Firebase for authentication, authorization, media storage.
- Created an Admin dashboard and integrated the YouTube API for efficient management of video-based lessons.
